

WORKFLOW FOR X-SPACE STYLE VOICE CHAT (NO RECORDING SECTION)

1. Create a Voice Chat Room (Space)

- User taps "Create Voice Room / Start Live Audio"
- User sets Title, Topic, Visibility (Public / Followers / Private)
- System generates Room ID
- Creator becomes Host

2. Host Permissions

- Start/end the voice chat
- Invite speakers
- Approve/deny speaking requests
- Mute speakers
- Assign Co-Hosts / Moderators
- Remove or ban users
- Manage chat/comments
- Pin messages

3. Assign Moderation

- Host long-presses a participant → "Assign Role"
- Roles:
 - Co-Host: full control except ending the room
 - Moderator: mute, approve requests, remove users
- System confirms new role

4. Listener Workflow

- Join the room
- React with emojis

- Request to speak
- Share the room
- Report a user

Request to Speak:

- Listener requests → appears in Moderator/Host queue → approved/denied → becomes Speaker

5. Speaker Workflow

- Can speak and mute/unmute
- Can request to pin a message
- Host/Moderator can mute them, remove from speaking, or kick them out

6. Moderation Tools (Host, Co-Host, Moderators)

- Hard mute
- Soft mute
- Move to Listener
- Remove from Space
- Ban user
- Report user
- Shadow-ban (optional)

7. Report Workflow

- Any user can report a speaker or content:
 - Nudity
 - Harassment
 - Hate speech
 - Scam
 - Underage
 - Spam

- Report goes to App Moderation Dashboard
- Moderators can take action inside the room
- App team can strike or suspend accounts

8. AI Auto-Moderation (Optional)

- Detect bad language or violations
- Auto-mute user
- Send warnings
- Notify host

9. Ending the Voice Chat

- Host taps "End Space"
- Confirmation popup
- All users disconnected
- Summary saved: total listeners, max concurrent listeners, active speakers, duration
